Retech Labs - UI ENGINEER

Create a Shopping cart website front end where you can:

1. Browse through a list of products. You can also search for a product.
2. You can add products to cart.
3. Cart automatically gets updated as soon as any product is added into it.

You can use any Java script MV* framework. For data you can write a dummy backend server or you can use browser's local storage.

Guidelines

- Should be a Single Page Application by using AngularJS
- Use HTML5 that validates W3C guidelines.
- Use Bootstrap, custom CSS and custom media queries that validates W3C guidelines.
- This should work across IE9+ and the latest version of Firefox.
- The mark-up should be semantic.
- Follow the basic accessibility guidelines.
- Use Angularjs, jQuery and OOJS for all JS functionality.
- For icons in footer, use fontawesome or any other font library.
- We expect you to write a custom code, with or without the use of any JS library, however you are free to use plugins to build the functionality

Angular Store
Welcome to the Angular Store.
Please select the products you want and add them to your shopping cart.
When you are done, click the shopping cart icon to review your order and check out.
Search: ap
3 items, $28.00
Apple
Eat one every day to keep the doctor away!
$12.00
add to cart
Grape
Wine is great, but grapes are even better.
$8.00
add to cart
Grapefruit
Pink or red, always healthy and delicious.
$11.00
add to cart
Papaya
Super-popular for breakfast.
$5.00
add to cart
Pineapple
Enjoy it (but don't forget to peel first).
$4.00
add to cart
